

Dalian Xinggong Safe Community Annual Report 2010

(January 1, 2010-December 31, 2010.)

Population Features:

By 2007, the total number of households in this jurisdiction is 34 thousand and the total population is about 100 thousand, among which the number of local population is 85,393. It is one of impacted areas of Dalian City. 12,297 people are over 65 years old, which takes up 12.3% among the total population; 731 people exceed 80 years old, which occupies 0.73% among the total population; 1,023 disabled people; 1,256 households enjoy the minimum living relief in this community, with the security area of 3.1%.

Community Name: Xinggong Community, Shahekou District, Dalian City, Liaoning Province

Country: China

Submission Date of Annual Report: January 10, 2011

Contact Person: Liu Yang

Position: Director of Xinggong Street Safety Community Promotion Committee

Office of Dalian City

Email: maik_0411@163.com

Norm 1 – Members of Promotion Committee

1. Have your international safety community promotion committee (promoting council) been changed greatly in the past 12 months?

Yes

No

2. Details of the present organization member list.

Safety Community Promotion Committee Member List

Name	Position	Work Unit
Fu Yue	Director	Xinggong Street Office
Yue Weiqi	Deputy-director	Xinggong Street Office
Yao Zhanyou	Deputy-director	Xinggong Street Office
Members		
Liu Xifeng	Director	Quanyong Police Station of Shahekou District
Song Xiaoyou	Director	Xinggong Police Station of Shahekou District
Han Bin	Headmaster	Xiongong Primary School

3a. How often did the organization (promotion committee) hold a meeting in the past 12 months?

Hold a meeting every three months.

Please see Appendix 1 for details.

3b. Have the source of funds of safety community been changed in the past 12 months?

Yes

No v

Norm 2 – Continuously Developing Safety Promotion Project

4. Have the working team, key point and working area of your safety community been varied in the past 12 months?

Yes

No v

5. Please list three successful cases in your safety community project in the past 12 months and provide details (such as the type of the achievement, whether promoting and enhancing the connections among partners or not, whether being in favor of absorbing the funds or not, or the results of attaining).

Case I

Home safety team *Helping Ten Thousand Families* work spread out entirely which gained favorable social effects. Since establishment at the beginning of the year, the service group has always been pursuant to the principle of *Grant whatever is requested, help whatever is difficult*. According to the actual situations of the area, the service group expanded the service contents in the exploration, enlarged the service categories, placed extra emphasis on the sufferings of the vulnerable groups, built the files of residents in difficulties and buildings without control, changed various devices for the families in difficulties free of charge, and provided the service of the special car for sending the examinees from difficult families and the disabled examinees in the area. The street *Helping Ten Thousand Families* service group accepted the residents' asking for help by phone, and meanwhile it shared the information with the divisions involving street minimum living standard security, the disabled federation and special care, developed the initiative door-to-door service, and established the long lasting service mechanism for the vulnerable groups involving social orphans and old people, the disabled persons and residents with minimum living standard

security to be on call, grant whatever is requested, and help whatever is difficult. The service group invested about RMB 40,000 accumulatively all the year round to purchase the living goods and repair tools such as water pipe and power switch closely linking with the daily life of the civilians. It accepted the residents' asking for help for about 1,500 times accumulatively, with over 800 telephone consultations and 551 door-to-door services of the street *Helping Ten Thousand Families* (serving for the vulnerable groups for 63 times initiatively), and provided the driving services for the vulnerable groups for about 300 times in the area. The street *Helping Ten Thousand Families Service Group* has become the *Convenience 110* of the area and got the general approvals of the masses in the area.

Case II

Through the household field survey in 2009, it was discovered that there were totally 28 fire disasters in Xingong area with 17 home fire disasters covering 60% of fire disasters. The main reasons were the residents' carelessness, the bad memory of the old people, forgetting to close the gas valve, the aging gas pipe, non-using the professional gas pipe and clip, and lack of fire protection safety knowledge etc. In allusion to the actual situations of Xingong area, the fire protection safety team installed the gas alarms and liquefied gas alarms for over 1,000 families with minimum living standard securities in the area during July and September 2010. The possibilities of the accident occurrence were reduced through installing the gas alarms, the hidden dangers were removed, the life safety qualities of the vulnerable groups were enhanced, and the residents' high attentions on the gas safety work were strengthened.

Case III

Phase II modification project of Xi'an Road, Changxing Urban Complex, absorbed the most mature experience of quake prevention as well as disaster reduction from Japan, Germany and Italy, built the earthquake safety model community starting with the planning and design, and enhanced the fortification grade, which guaranteed the constructive standard and quality of the earthquake safety community fundamentally. And it also planned the indoor and outdoor emergent shelter, indoor safety island, emergent risk avoiding channel, emergent risk avoiding and self as well as mutual aid appliance, emergent rescue volunteer group, and the popularity and publicity of quake prevention and disaster reduction knowledge, and was the first one of building the earthquake safety community with high standard comprehensively and systematically nationwide, which had the milestone significance in the quake-proof realm of the Chinese architecture.

Norm 3 – High Risk Crowd/ Environment

6. Please describe the jobs and achievements of your community on account of high risk crowd/ environment in detail in the past 12 months.

Through the survey, Xinggong Community had 698 disabled persons with 93% of disabled persons as the recovery requirements. Thus the home safety project team established a recovery service group for the disabled persons. The members of the recovery service group were 20 persons mainly with intelligent disabled persons. The mild physical disabled persons assisted the recovery teachers to make recovery for the intelligent disabled persons, which drew the disabled persons closer to be easy to communicate, and also provided the work post for the physical disabled persons to relieve the burdens of these parts of disabled families. The practice of *Aiding for disabled persons by disabled persons* obtained the unanimous approvals from the disabled federation of Shahekou District, and was promoted in the whole district as

the major work of the disabled federation.

Norm 4 – Injury Information

7. Have you analyzed the injury/ crime information in the past 12 months?

Yes

No

If yes, please explain the sources of the data, and summarize the influences of the data on the main points of your community jobs.

We revised the questionnaires of the former years to make the contents live up to the reality of the area more. In January 2010 we issued 500 resident injury questionnaires and children injury questionnaires respectively with the recovery rate of 89% and 95.6%, which provided the accurate data for expediting the improvement work of the project.

Questionnaires show that:

1. The effectiveness of *Helping Ten Thousand Families* service group was approved by the residents and would improve continuously at the same time.

2. The gas accidents still happened, so the gas alarms were installed on account of the vulnerable groups, which solved and controlled the occurrence of gas accidents effectively.

Norm 5 – Evaluation

8. Please list three cases of safety project evaluation on the area and provide the brief summary of the evaluation result and the entire situation of the evaluation discovery and formulating the continuous improvement plan. This part also includes other relevant report attachment.

Evaluation Example I

Major causes for the accidents happened from the year of 2007 to 2009

a) Driving against the regulations and laws, driving too fast and the drivers cannot

settle the emergency situations calmly.

b) The traffic jam caused by the random parking

c) Drivers can not make any compromise to each other, they cut off and always want to be the first to pass through

d) Low safety awareness, drivers drive the cars after drinking alcohol or fatigue driving

Wherein the drive against laws and regulations cases number was 41, and random parking 15 times, fluke mind 27 times, and low safety awareness cases 20 times. And the traffic accidents happened in the main roads number was 33 times, and 36 times for the secondary main road, 14 times for near the school places and 20 times for the surrounding places of the supermarkets. Meanwhile, the traffic accidents happened in the peak hours number was 49, and 17 happened about the noon time, 13 times in the afternoon and 24 times at night.

Continuous Improvement Plan:

1. Establish new traffic safety work organization, formulate traffic safety responsibility document, and require every driver to write a traffic safety warranty;
2. Register and archive the unattended vehicle and driver in the area under administration;
3. Increase crossing electronic command system;
4. Maintain and transform the road, and make the reasonable planning;
5. Enlarge the punishment force and punish severely the phenomena involving drunk driving, follow-up in green light, and motor vehicle cutting in etc.

Evaluation Example II

Causes of gas accidents from 2007 to 2009

Mainly attribute to memory deterioration of the old, pipeline aging and lack of safety common sense, and these resulted in 4, 4 and 2 accidents respectively. Major places of gas accidents are homes and restaurants which stands at 7 and 3 meanwhile 4 accidents occurred at daytime and 5 at night. The result illustrates that homes are

more easily to have gas accidents at night so that residence shall strengthen safety works of gas accidents nightly.

Continuous Improvement Plan:

1. Carry out safety knowledge education for industry units widely and deeply with publicity boards in anniversaries so as to make employees and alien workers to grasp gas safety common sense and improve self prevention capacity;
2. Install gas alarm for vulnerable groups such as people with basic cost of living allowance, orphans and widows etc.
3. Strengthen residential pipeline overhaul with the coordination of gas company workers;
4. Renewal aged gas pipes networks.

Evaluation Example III

Main Causes of Block Construction Accidents and Injuries from 2007 to 2009:

1. Road improvement and construction; broken bricks and debris were scattering on road; bad closed situation;
2. The construction was carried out at night in some blocks. The signs and logos were not clear and not placed obviously;
3. The sundries were stacked inside the residential buildings and occupied the corridor. Thus, the corridor was getting narrow and very crowded. Once a hazard happened, it seriously affected the escape.

Continuous Improvement Plan:

1. Refurbish the byroads of abandoned buildings & yards, and install the night lights;
2. Refurbish the bumpy building and yard; remediate the misplacing lumber of the residents;
3. Clear up and transport the building waste without the owners;
4. Establish the supervision & inspection team-“being responsible for general sanitation, green covering and keeping good social order in a designated area outside the unit building” and sign the letter of responsibility of “being responsible for general sanitation, green covering and keeping good social order in a designated area

outside the unit building” with the industry unit within the Jurisdiction.

5、 Strengthen security patrols

Norm 6 ——Online Activity

9. In the past 12 months, whether the community members of yours has attended the following activities :

International Online Meeting Yes No.

Domestic Online Meeting Yes No.

Local Online Meeting Yes No.

Safety Community Online Activity	Domestic Online Meeting	Local Online Meeting
Time	17 th Nov,2010	Mar,2010—Dec, 2010
Place	Chongqing	Dalian
Name of Meeting	2010 National Safety Community Construction Work Meeting	1.Receiving the Xi’an oil field learning team 2. Receiving learning team of Anshan City 3. Receiving the Changxing Island learning team. 4.Receiving other streets of the city (Hongqi Street, Baoya Street, Lingshui Street, Maqiaozi Street and Wali Street)
Making great contribution in promoting the development of the safety community	Having carrying out experience exchange on the concept research and practice process of the safety community construction; and having played an effective role as the international safety community; the community and the mass have	The safety community construction has taken on strong vigor and vitality and has the tendency of further development, the safety community construction has formed rich establishment atmosphere in some areas; and it also has given technology support

	<p>become more concerned about safety and health, and their attitude to the safety have changed a lot, thus the online activity has achieved apparent success.</p>	<p>and consultation guidance to those trainee communities; and it has played an important role as well as exerted great influence on the construction of the harmonious society.</p>
--	--	--

Notes:

10. What were the major challenges that your community have encountered in the past 12 months, and what the community has done in facing with these challenges?

In the past 12 months, the major challenge which our community has encountered is the old town relocation reconstruction of the Xingshe Community.

Solutions

The demolition of the No. 1 and No. 2 high buildings in Xi'an Road.

1. Strengthening the organization leadership, clearing the work responsibility, dividing the specified safety production target and safety management content into small sections, and the responsibilities have been distributed to the departments, units and individuals, moreover, it has held the safety supervision coordination meeting many times, thus it has formed the upper and lower level well communicated and criss-cross safety management networks among the government, demolition office, demolition company and development department.

2. Being strict in work system, perfecting the management measures. The *Safety Demolition Construction Management Specifications and safety Production Comprehensive Treatment Plans on Demolition Site* have been stipulated practically, and it has also let the safety management work reach the system assurance level in the form of *Responsibility Warrant*.

3. Fixing on education and training to improve the safety consciousness. And through the constant holding of the safety production work promotion meetings and carrying out of the safety knowledge trainings as well as safety knowledge competitions to not only improve the safety production skills of the operators, but also form the think safety demolition atmosphere.

4. The site management has been strengthened, and the prevention measures has been taken, as the conspicuous markers, safety bulletin boards , prevention nets has been set on the housing demolition construction site as well as the entrance and exit, and still the construction in the separation belts has been prohibited.

5. The safety dynamic management has been implemented, it required each construction team to report the personal injury and death or the dangerous cases happened in the demolition construction process timely as per the safety accident treatment procedures and regulations, and still the construction team shall not delay or hidden the above information.

6. Strengthening the inspection and urge, and taking immediately correction measures on the discoverable problems, and only in this year, it has carried out the safety inspection and supervision of more than 20 times, and has carried out the correction and treatment action on more than 10 irregular demolition construction behaviors and safety hidden dangers

11. What were the major opportunities that you have encountered in your community, in the past 12 months, and what the community has done in facing with these opportunities?

In the past 12 months, our community has encountered the major opportunity of the completion of the first earthquake safety demonstration community of China in this district. And the Changxing Urban Complex —— as the first commercial development program of the second phase innovation project of the Dalian Xian Road, has absorbed the most mature earthquake prevention and disaster reduction experience from Japan, Germany and Italia; Moreover, it has built the earthquake safety demonstration community which proceeded with planning design, and has improved the fortification grade, that's, ensuring the standard and quality of the earthquake safety demonstration community construction fundamentally. More importantly, the program also included the planning on indoor and outdoor emergency shelters, indoor safety islands, the emergency hedge passages, emergency hedge and self and mutual medical aid appliances, emergency rescuing voluntary team building

and the popularization and promotion on the knowledge of the earthquake prevention and disaster reduction, thus the earthquake safety demonstration community construction is so large scale, systematic and high standard that it was the first case in China and had the milestone significance in the building earthquake prevention field of China as well.

Xinggong Community has mainly carried out the following work:

1. Establishing the organization and Clearing the responsibility. The Xinggong Community has established the earthquake prevention and disaster reduction work lead group;

2. The earthquake prevention and disaster reduction emergency facilities have been purchased in this community. Moreover, the community has equipped with necessary emergency equipment and facilities of earthquake prevention and disaster reduction on the medical aid, lighting, rescue and relief work as well as information transmission and so on;

3. The project safety situation on the construction site has been checked duly, and the communication with the developers has been carried out from time to time and the potential safety dangers have been delimited timely;

4. The voluntary team on earthquake prevention and disaster reduction. By Dec, 2010 has been established, it had organized the residents of the community to carry out lecture on the knowledge of earthquake prevention and disaster reduction for 4 times, and had held the scientific popularization photo exhibitions on earthquake prevention and disaster reduction 5 times, and still had self- made and handed out the promotional materials on earthquake prevention and disaster reduction knowledge of more than 2,000 copies.

In all, the Xinggong Street will cooperate with each party actively and try its best to integrate all kinds of resources within the district and thus finally make the safety community construction take on a vigorous development situation.
