

Jinggezhuang Safe Community Annual Report2010

(January 1---December 31)

Feature: Quantity of resident: 6523 (2010)

Quantity of staff: 5271 (2010)

Name of Community: Kailuan Jinggezhuang Community, Hebei

Country: China

Date of Presentation: January 20, 2011

Name of the Contact: Liu Li

Position of the Contact: Chief of Safe Community Office

Email of the Contact: liuli@kailuan.com.cn

Criteria 1---- Members of Promoting Committee

1. Over the past 12 months, owing to the job transfer, the members of Kailuan Jinggezhuang National Safe Community Promoting Committee have greatly changed. The following are the members left:

Director Liu Jiming : director of service center of Kailuan Jinggezhuang community (transferred from the original post)

Cao Ronglai : principal of Jinggezhuang primary school, Kaiping district (retired)

Liu Jilin : chief of subdistrict office of Jinggezhuang (transferred from the original post)

Yao Taicheng : president of Jinggezhuang hospital (transferred from the original post)

Wang Wenzhang : vice director of comprehensive renovation office of Jianggezhuang region (transferred from the original post)

2.To ensure the continuous promotion of the safe community, relying on the

changing situations, we have readjusted the organization and its members. At present, Jinggezhuang promoting committee of safe community contains:

Director Zheng Guangjian : director of service center of Kailuan Jingcang community

Vice director Shang Bingying : safe vice manager of mining industry company, Kailuai Jinggezhuang

Su Shihuan : vice director of service center of Jingcang community

Members Liu Li :vice chief of CPC Party-mass sector of Jinggezhuang community

Li Jian : head of Xinjing Police Substation, Kailuan Branch, Public Security Bureau

Ji Ruiqian : principal of Jinggezhuang primary school, Kaiping district

Li Zhenglin : president of Jinggezhuang hospital, Kailuan Medical Group

Zheng Yongtian :director of comprehensive renovation office of Kailuan Jinggezhuang Community

The Promoting Committee of Safe Community Office is located in the Party-mass Sector of Jinggezhuang Community.

Director of office: Liu Li (concurrent)

Email: liuli@kailuan.com.cn

3a. Over the past 12 months, the Safe Community Promotion Committee of Jingcang Community has held a meeting on February4, 2010. At the meeting, we have summarized the former work, evaluated the achievement in safety promotion and arranged for the deployment of the next task. It has promoted the normal work of the cross-sector leadership in the past year. (See appendix 1)

3b. Concentrating on the improvement of the workers and family members' happiness index, in 2010, Jinggezhuang community has invested more than 3,000,000 Yuan to improve the living environment. In this year, more than 40 projects have been started and some of them are completed. The programs are hazard-control, infrastructure improvement and so on. And activities are such as safety promotion program, injury surveillance and safety propaganda.

Criteria 2----Continuous Development on the Safety Promotion Program

4. Over the past 12 months, there is no change in the work team of Jinggezhuang safe community. The community placed emphasis on some safety promotion programs, such as traffic, fire-fighting, public order, domestic and school safety. To the high-risk population and environments, the community has developed injury prevention programs to protect the empty-nest elders, children and the workers in workplace.

5. During the past 12 months, Jinggezhuang safe community has promoted 3 key projects on the safety community promotion program.

CCVD Interventions Program In view of the increase of CCVD, which has greatly influenced the residents' physical and mental health, the community has started the intervention project at the beginning of the year. To prevent and reduce the damage caused by sudden cerebrovascular disease and to ensure the health of the residents, the community has conducted many projects, such as carrying out health education into the community activities, inviting experts to make regular lectures on this disease, implementing healthy psychological counseling and making dynamic monitor for the patients' constitution parameter. Besides, the community has distributed the limited salt spoon and pot to each family. They went to households to propagandize the significance of the limited salt spoon and pot in Preventing the cardiovascular and cerebrovascular diseases. Thus the residents' cognition rate of the

disease has greatly boosted.

Domestic Safety Promotion Program The community continues to deepen the safety promotion program in the use of household stove and electricity. For example, combining with the gas company, we have checked all the household gas users in Jinggezhuang. Since the May of 2010, the community has invested 3,740,000 to replace the Gas Meters for the 2336 families in two lots. So the hidden dangers have been eliminated. And it has strengthened the safety propaganda and promoted the safety of the gas users. We have strengthened the investigation of the power supply system in Jinggezhuang area in order to make in time reform in case of the power supply accidents. The community advocated monthly check on the safety use of power to improve the phenomenon of chaos wiring in corridors and coal sheds. Taking advantage of the Safety Production Month and Science popularization Month , the community conducted safety propaganda and consulting activities to ensure the safe use of power.

Public Security Program To strengthen the supervision and patrol of the community, jointing together with the security squadron, we have built up the police station and established the community policing prevention committee. Besides, we have organized volunteers and security guards to form the security patrol and community joint security team. The Far-infrared electronic surveillance system installed in the districts offered a 24-hour inspection and ensured the residents living safety. Meanwhile, to increased the residents' safety awareness and safety ability, we have invited the legal publicity team to tour in the community and we have organized many targeted activities such as the exhibition of the board, legal consult, propagation of the paintings and so on to propaganda security guard knowledge.

Criteria 3----High-risk Population Groups and Environments

6. In 2010, we organized the injury prevention project to protect the empty-nest elders, the personnel and other high-risk groups.

Safety Promotion Program for Empty-nest Elders We opened safety health files for the single-dwelling elders over 60 years old and established the children contact cards and family emergency rescue brand. Also, the community insisted on health tracking, regular health check and mental health education and formed a comprehensive service network. For instance, the community organized volunteers to form the “more help one” twinning helping, established "week contact" communications system, conducted the “daily meet” and “daily contact” working system for the advanced age and the “spatial nest" old persons and provided the empty-nest elders with safe services in power and gas. Besides, in consideration of the action inconvenience of the aged caused by body function aging, the community presented non-slip mats to the elders. And meanwhile with the help of the Red-beautiful-unique elderly activities team, the community taught and popularized the body balance to prevent aged people from falls .

Safety Promotion Program at Work Site Based on the injury monitor and united with the Shantou Medical University, the community made some injury investigations and studies on the chronic diseases. And it organized the inspectors to conduct some questionnaires and to operate the statistics and analysis of musculoskeletal injuries to found out the reasons of injury. By means of lectures and promotional leaflets, the community selected 500 miners to implement the intervention study, which greatly increased the miners’ cognition of Musculoskeletal Disorders and changed their behaviors. Besides, the community perfected the workers’ health files based on the 2010 employees’ physical examination results, trained the first-aiders of each team and invested part of funds to update the 26 first-aid kit drugs and equipment. To promote the improvement of the health-care system of the employees, the community insisted on the shift health tests for the key monitoring employees.

Criteria 4----Injury Statistics

7. At the beginning of each year, we usually made collections and analysis of the

injuries according to the data of the hospital daily monitor. The analysis of the hidden peril, the characteristics of the injured groups and the features of the injuries provided reliable evidence for the formulation of the next intervention measures.

An Analysis of Hospital Injury Monitor:

The contents of the hospital injury monitor in 2010 mainly contained: injury groups, injury causes, injury locations, injury parts and injury severity and so on. The information of 249 injured patients was collected, including 201 males and 48 females. According to the inspection, the male incurred more injuries with a percentage of 80.92%. During the injuries with different age groups, the 25-44 years occupied 40.96% of all the injuries and with a population of 102. Analyzed by the causes, fall injuries ranked the first. The following are the blunt instrument injuries, knife or sharp instrument injuries and traffic injuries. The analysis of the injury locations showed work site injuries and construction injuries lead the first(67.87%). And male constituted a domestic proportion among all injured people. Most of the damages are minor wounds And the main injured parts are upper limbs and lower limbs. There is a upward trend of the injury data in 2010.

Criteria 5----Evaluation

8. The community insisted on the weekly inspection of the work sites and overall seasonal inspection on the standards of safe quality to monitor the fulfillment of the safety management institutions, the situation of some key parts, the hazards and people's safety actions. At the beginning of December, 2010, the community conducted the annual safe community evaluation of 2010. It was required that each safe community working group present the month-report . It should contain the following contents: the realization of accident injury program, the effect of the safety promotion planning programs, the management of some key sites, equipment and facilities, the equipment of the high-risk environments and populations, the improvement of safe awareness, the participation of the people and its effects. Besides, the community has organized the investigation on the rate of satisfaction and popularization.(See appendix 2)

Criteria 6----Activities of Network

9. Over the past 12 months, Jinggezhuang Community has actively engaged in the national, international and internal exchanges.

a). International Network Conference No.

b) National Network Conference Yes.

November 2010 participate in the training course of Safe Community Construction held in Sichuan

c) Local Network Meeting Yes.

Besides, we have participated in the terminal working meeting of safe community held by Kailuan Group, reported the schedule and exchanged and communicated with other Groups.

Notes:

10. Over the past 12 months, what were the great challenges to your community? And what measures have been taken?

No.

11. In the past 12 months, what's the great opportunities for your community? And how did the community prepared for them?

No.

12. At last, you can state what you want to say about the safe community and the network. (e.g. What's your opinion on how to make the network offer better services to its members?)

Appendix 1:

Summary of the Meeting

Date: February4, 2010

Place: the meeting room of the community

Participants: Jinggezhuang Promoting Committee of Safe Community, members of Working Committee

Contents:

First, vice director of safe community promoting committee, Su Shihuan, made a report on *Working Summary of Jinggezhuang Community in 2010 and Working Arrangement of 2011*.

Second, Liu Li, director of the establishment of Safe Community Office, made the report on *Working Evaluation Report on Safe Community of 2010*.

Last, named and rewarded the advanced collectives and advanced individuals in safe community construction.

Appendix 2:

Annual Assessment Report on the Safe Community of 2010 by Jinggezhuang Community

To heighten the establishment level of safe community and steadily improve our work, Jinggezhang safe community construction office has made a overall analysis and systematic evaluation. The following are the results of the evaluation:

一、 Basic Situation

1. We perfected the basic work in safe community construction. Firstly, according to the personnel change, the community readjusted the construction organization and its members and ensured the continual improvement on the way of safe community construction. Secondly, kinds of systems such as the hazard Identification, safety evaluation, safety confirmation, safety inspection, education training and performance appraisal programs are strengthened. And it ensured the standard operation of safe

community work. Thirdly, we have Strengthened the studies and discussion in safety promotion work. And with the help of all sorts of promotional and educational positions, the community organized the working personnel and family members to develop kinds of education activities. All these has improved initiative and participation enthusiasm of the residents.

2. The community strengthened the construction projects. First, it played emphasis on implementing the cardiovascular and cerebrovascular diseases prevention program. The community carried out health education into the community activities and distributed the limited salt spoon and pot to the residents, which has greatly boosted the residents' cognition rate of the disease. Second, the community implemented the domestic safety promotion program. It has invested 374,000 Yuan to replace the gas meters for the 2336 families and eliminated the hidden dangers. We have strengthened the investigation of the power supply system in Jinggezhuang area in order to make in time reform in case of the power supply accidents. The community advocated monthly check on the safety use of power. Taking advantage of the Safety Production Month and Science popularization Month , the community conducted safety propaganda and consulting activities to ensure the safe use of power. Third, the community conducted the public security program. Jointing together with the security squadron, we have built up the police station and established the community policing prevention committee to strengthen the supervision and inspection of the community. Meanwhile, to increased the residents' safety awareness and safety ability, we have invited the legal publicity team to tour in the community. Fourth, the community conducted the safety promotion program for empty-nest elders. We opened safety health files for the single-dwelling elders over 60 years old and established the children contact cards and organized volunteers to form 36 "more help one" twinning helping groups, which provided the empty-nesters with safety service, health service, loving service and so on and formed a loving atmosphere in the community. Fifth, the community also conducted the work site safety promotion program. Based on the injury monitor and united with the Shantou Medical University, the community made some injury investigations and studies on

the chronic diseases. And it organized the inspectors to conduct some questionnaires and selected 500 miners to implement the intervention study, which greatly increased the miners' cognition of Musculoskeletal Disorders and changed their behaviors. Besides, the community invested part of funds to built up 26 first-aid kits and organized the first-aid teams. To promote the improvement of the health-care system of the employees, the community insisted on the shift health tests for the key monitoring employees.

3. The community conducted the environment project. Aiming at the kinds of hazards and plant ageing, the community implemented more than 40 projects, such as the road hardening project, corridor culture, the kindergarten, activity stations, boiler rooms, roads, "four supply" systems and the streetlights. All these projects have extremely avoided the unintentional injuries and greatly increased the safety index of the community environment.

4. The statistics and analysis of injuries. The 2010 hospital daily monitor injuries data showed that the contents of the hospital injury monitor mainly contained: injury groups, injury causes, injury locations, injury parts and injury severity and so on. The information of 249 injured patients was collected, including 201 males and 48 females. According to the inspection, the male incurred more injuries with a percentage of 80.92%. During the injuries with different age groups, the 25-44 years occupied 40.96% of all the injuries. Analyzed by the causes, fall injuries ranked the first. The following are the blunt instrument injuries, knife or sharp instrument injuries and traffic injuries. The analysis of the injury locations showed work site injuries and construction injuries lead the first (67.87%). And male constituted a domestic proportion among all injured people. Most of the damages are minor wounds. And the main injured parts are upper limbs and lower limbs. There is an upward trend of the injury data in 2010.

5. Degree of satisfaction and popularizing rate. By means of questionnaire, the community evaluated the 2010 safe community work. And about 100 copies of questionnaires were sent to the residents. The community conducted random investigation to the residents and workers in Jinggezhuang community. The contents

includes the safety knowledge recognition in traffic, fire-fighting, household life and health. And it also included the satisfaction degree in living conditions, traffic conditions, security environment and safe promotion projects. In 2010, the safety recognition degrees of the residents reached 95% and the satisfaction degree was 92%.

二、 Problems and Weak Links

In summing up the former achievements and according to the self-dissection and analysis of the inspections of the residents on satisfaction rate, we have realized that there are still some spatial and inadequacy in our job.

First, on program construction, there are great inadequacies for each group in investigating, analyzing, planning, implementing and self-evaluating.

Second, as to the basic management, there is a phenomenon of setbacks in each group. And the implementation of the systems and the division of labor and personnel are diverse.

Third, publicity activities are too quiet and limited and not all the members are engaged in it.

Fourth, on the organization construction, the organizations did not play full roles in the daily jobs. Regular meetings and activities should be held to find the inadequacy, plan and promote the job. Especially, the convener of the district and the head of each special groups should take on responsibilities to ensure the solid development of the work.

三、 Suggestions on the Next Key Jobs

First, to strengthen the study on safe community and standardize all kinds of management systems. Also, we should pay special attention to the key links, enhance the force of practice and organize regular self-evaluation to promote the continuous development of the safe community work.

Second, continuously strengthen the training and educating jobs on safe

community, clear the monthly schedule, fulfill the goals set at the early year and make sure that all the projects should be finished by required quality and quantity.

Third, continue to strengthen the basic work and perfect various of work records following to the criteria to ensure the sustainability of the job.

Fourth, we will continue to do injury monitoring work and ensure the hospital monitoring in place and feedback timely to provide correct scientific basis for the development of safety promotion work.

Fifth, to constantly enrich the work carrier and realizing ways in safe community construction and widely develop various forms of activities to strengthen the interaction between residents and the construction job and to improve the participation of residents and employees.

Last, we should continue to do the construction projects well and put the projects into action. An appropriate estimate should be done well to decrease the accidents and injuries.
